

PYTHON EDA & VISUALIZATION — CHART GALLERY

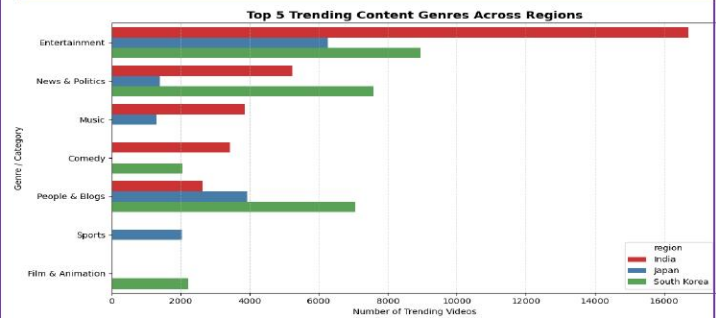

SQL + Python (pandas, seaborn, scipy) · 39,199 trending videos across India, Japan & South Korea

1 · VIRAL VELOCITY: DAYS TO TRENDING BY REGION

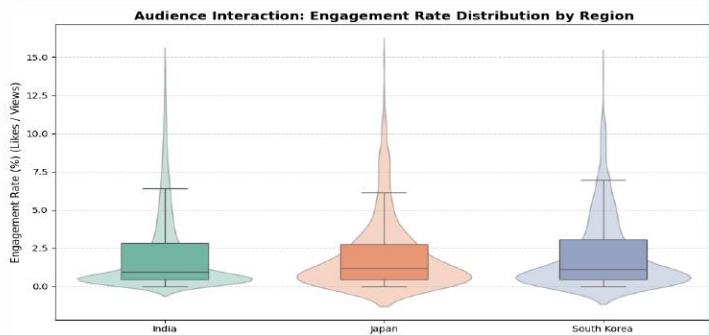

India spikes sharply Day 1–2 then decays fast; Japan is a slow-burn peaking Day 3–5; South Korea holds a steady, moderate rise Day 2–4. Confirms front-loaded spend for India vs. sustained exposure for Japan.

2 · TOP 5 TRENDING GENRES BY REGION

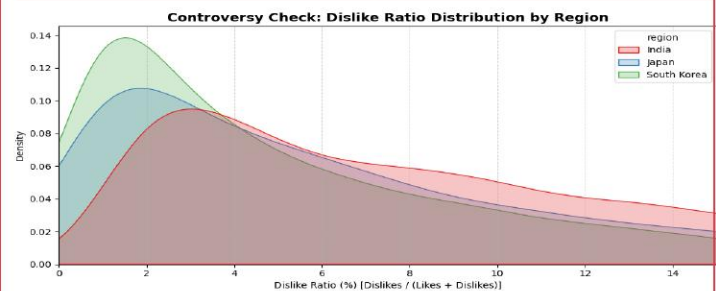

Entertainment dominates all 3 markets (India 16,712 · S. Korea 8,955 · Japan 6,259). India's #2 is News & Politics (5,241); Japan's #2 is People & Blogs (3,915) — genre mix should guide creative placement.

3 · ENGAGEMENT RATE DISTRIBUTION (LIKES / VIEWS)

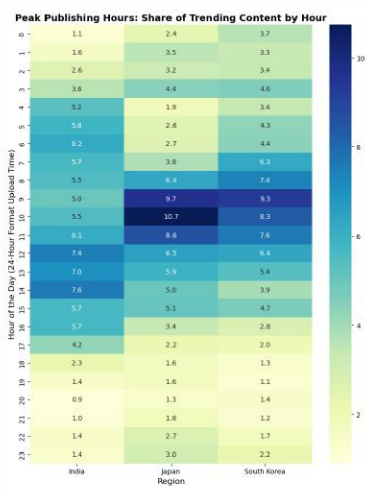

Median engagement: India 0.94% · Japan 1.16% · S. Korea 1.10% (means all ~2.05–2.13%). Kruskal-Wallis $H=0.81$, $p=0.667$ → **not statistically significant** — core engagement is uniform cross-border.

4 · DISLIKE-RATIO (BRAND-SAFETY FRICTION) DISTRIBUTION

Avg. dislike ratio: India 7.91% (highest friction) · Japan 6.19% · S. Korea 5.33% (safe haven). Kruskal-Wallis $H=4886.88$, $p<0.001$ → **highly significant** — brand-safety risk is culturally driven.

5 · PEAK PUBLISHING HOURS BY REGION (% OF TRENDING UPLOADS/HOUR)

Japan and South Korea show a sharp mid-morning spike — **peak trending-upload share hits 9.7% (Japan) and 9.3% (S. Korea) at 9–10 AM**, with Japan alone reaching 10.7% at 10 AM. India's curve is flatter and peaks slightly later, around 12–2 PM (7.0–7.6%). Across all three regions the **08:00–12:00 local window** consistently carries the densest share of high-velocity uploads — the ideal window to inject campaign assets and influencer drops for maximum organic visibility at the lowest initial bid cost. Overnight hours (18:00–06:00) are consistently the weakest across every market and should be deprioritized.

TAKEAWAY: Engagement behavior is universal (safe to standardize creative) but brand-safety friction and publishing rhythm are region-specific — India needs front-loaded, closely-monitored spend; Japan & South Korea support steadier, safer, narrative-driven placements inside the shared 08:00–12:00 window.
